

If you are looking for a powerful suite of management tools to help manage the training and proficiency checks of your personnel and track and record maintenance and safety checks on airport equipment in the most efficient way possible in line with EASA requirements then look no further.

The Redkite EASA compliance systems will help you comply with the latest training and proficiency requirements and automate many of the time-consuming processes involved in managing repeat or refresher training and proficiency checks.

The Redkite EASA compliance system will help you comply with the need to show that safety checks and maintenance on airport assets are being carried out by proficient personnel.

From a common repository you can obtain the information you need to comply with the training and asset management requirements of EASA.

From a single log-in portal you can access the e-dashboard of either the training or asset management system quickly and easily.

Redkite Competence Manager holds details of all training and proficiency checks. It also manages all refresher training and re-assessments to ensure that you remain compliant.

It provides management at all levels with up-to-the-minute information to ensure that training and proficiency is maintained to the highest possible standard.

Redkite Asset Manager quickly shows what has been done and what needs to be done to ensure ongoing compliance. Asset Manager holds details of all airport assets, their location / ownership and a record of all maintenance and safety checks undertaken.

In addition to helping comply with EASA, the Redkite system can also help with other airport requirements such as a GSAT and ASAT assessments.

In the UK Redkite is already in use in your Airport Rescue and Firefighting Service and has been used for many years to comply with the CAA CAP 699 requirements and is used today to comply with EASA requirements.

You can extend the agreement to use the Redkite system for use across one or more airport department for a small increase in the licence fees already being paid by the ARFFS.

Redkite EASA compliance system

When only the best will do

Provides information at all levels.

✓ Provides a centralised overview of the status of training, proficiency and assets across all or selected departments in the airport.

✓ Provides line management with a local view to ensure proficiency and safety checks are carried out in a timely manner.

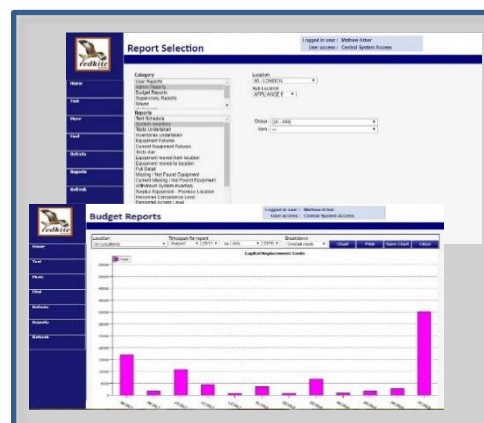

✓ Provides front line personnel with tools to undertake tasks quickly, easily and accurately.

A wide range of standard reports and charts available from standard menus.

With a wide range of reports to choose from you will be able to access all the information you will need quickly and easily. You can even customise reports and add them to your favourites menu.

The reports, with both local and centralised views, provide a wide range of invaluable management information.

For assets, budget reports are also available, showing spend by asset type, location(s), department(s) as well as forecast reports to project budgets for replacement assets over a selected period.

Numerous charts are available, and many reports can be exported to MS Excel, for example, for further manipulation and charting.

FREE secure hosting service. Your applications can be installed and accessed on our dedicated, secure hosted servers at no additional cost*.

We know we are the best, with an excellent track record with our airport customers and with oversight inspectors at the CAA... but don't take our word for it – here is a comment from one of our many satisfied customers.

“Glasgow Prestwick Airport have used Redkite Tracker for many years now to record, analyse and monitor training for all internal and external employees. The service we receive from Redkite Systems is first class. We normally receive a comprehensive reply to any queries within the hour, alongside regular hints and tips on how to get the most out of the system and save time. The system is updated and improved regularly because Redkite Systems listen to user feedback and requests for additional functionality. For example, the new Dashboard save a lot of time, providing a quick overview of the status of all training, eliminating the need to run separate reports.”

Moira Kelly, Employee Development and Engagement Manager, Prestwick Airport Ltd.
